

LITTLE GENERAL

CPKC's award-winning Little General was built in 2014, and participates in parades and community events across CPKC's network. Our employees and their families are at the heart of our mini-train program, volunteering countless hours to decorate, maintain, operate and share a message of rail safety.

Safety is an essential part of CPKC's culture and has always been a fundamental part of the mini-train program. Our goal is to raise awareness of the importance of being safe at railway crossings and around tracks and trains.

QUICK FACTS

- The train is a 1/4 scale model of a General Electric AC4400 locomotive
- The locomotive is powered by a Kubota tractor and pulls two cars behind it – a dome car and the caboose
- It has an authentic train bell, a real train horn, a stereo system and a bubble machine
- 60 feet long, 7.5 feet high, 5 feet wide and has a turning radius of 45 feet
- It can accommodate approximately 20 riders
- The Little General is transported in a 53 foot trailer pulled by a semi-truck
 - We're able to do this as each car is disconnected and placed close together
- 150 feet of space is required to park the trailer and unload train
- Takes about one hour to unload and set up the train for an event
- Takes approximately one hour to reload the train once the event is done
- The train is loaded backwards so that the locomotive is the first piece of equipment to be unloaded and we can drive the train out at the next event
